

Reference output

An Ordered Probit PMT Model on synthetic Susenas March 2022–2025 · the Stata output of the four do files

This is what the four completed do files print when they are run one after another on the delivered package. Your do files must reproduce every number here: every row count, every checkpoint table, every coefficient, every targeting error. Commands are not shown, only what they print. Step 2 holds the two linear models, step 3 the two ordered probits and, at the end, the inclusion and exclusion errors of all four models at the bottom 50 per cent.

Step 0 — s0_import.do: row counts of every imported file

Note: 84 observations completely determined. Standard errors questionable.

Variable	Obs	Mean	Std. dev.	Min	Max
ops_expected	343,460	6.191852	2.231353	1.006821	10

5. Targeting the bottom 50 per cent of the 2025 test round	

inclusion error = exclusion error, in per cent of people	
model	IE50 = EE50
1. PMT, linear, district FE	24.55
2. parsimonious, linear, district FE	21.05
3. PMT, ordered probit, district FE	24.52
4. parsimonious, ordered probit, district FE	21.09

Step 3 complete.
